

# Planet finger protection® quick mount

With the new generation of roller-blind type finger protectors and cover profiles, we have paid special attention to quick and easy installation. Adjustment options have also been incorporated in the totally new design. The parts can also be easily removed and re-fitted many times for maintenance, re-adjustment and cleaning.

## Marking aid

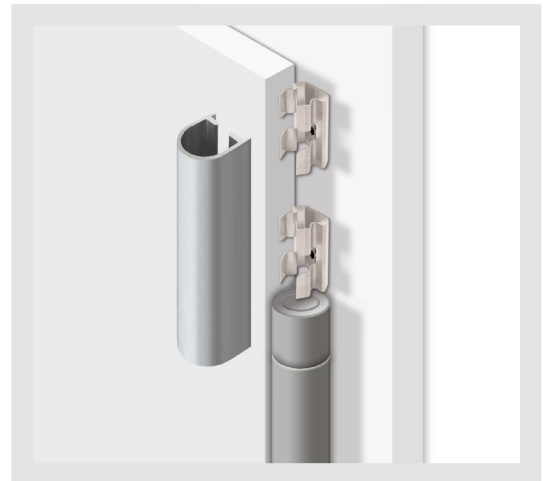

With the nifty and practical marking aid (illustrated on left), which is suitable for roller protectors and cover profiles, you can save much of your time or install 3 protectors in the time you would normally need for one!

## Practical clip-on system

With the practical clip-on system you'll no longer need two people to carry out the installation.

The profiles are mounted without any screw heads being visible, whilst installation and removal is easily performed. No parts are damaged or need to be replaced while doing this.

## Positioning aid and installation box

If you wish to get rid of the four-handed assembly procedure for ever, make use of our positioning aid.

And last but not least, with the installation box, our wish is for carpenters and metal workers to have a "helpful elf" on hand.
