The **Planet** closes the gap under the door silently and mechanically (without electricity).

**Working principle of a Planet**

When you **close the door** the release knob 1 will activate the Planet and the door seal 2 releases down to the bottom. The gap under the door is closed.

When you **open the door** the release knob will be deactivated 3, the seal goes silently up 4. It does not drag on the floor.

**SWISS MADE**
